

Job Portal API

1. Download the source code from GitHub: <https://github.com/ImamHossain-eng/Job-Post-Project>
2. Unzip the folder.
3. Setup the database according to .env file and import the job.sql file from the root folder.
4. Execute the command: `php artisan serve` to run the server.
5. See API Documentation: <https://documenter.getpostman.com/view/12436130/UVC6jmyS>
